

Pixelz AI Art Generator enables you to create incredible art from text. Stable Diffusion, CLIP Guided Diffusion & PXL-E Realistic Algorithms available! Pixelz was founded in 2011 in Holstebro, Denmark. Back then Pixelz was known as 'Remove the Background', based on a simple premise to make it easy for e-commerce companies to create beautiful product images.

Over the years, we've innovated in response to the industry challenges of fluctuating image volumes, slow workflows, and inconsistency in image quality. Through trying to solve these issues, we developed the concept of SAW – Specialist Assisted Workflow. An idea of splitting the retouching workflow up into many different steps assisted by AI technology. A completely different way of handling retouching than anyone had ever done before.
