

Topaz Labs is a forward-thinking software company that specializes in utilizing artificial intelligence (AI) to advance the quality of images and videos for professional use. Their flagship products, Topaz Photo AI and Topaz Video AI, are crafted to maximize visual quality, leveraging AI to enhance photos and videos with exceptional precision.

Topaz Photo AI stands out with features like UPSCALE, which enlarges images without losing detail, and Face Recovery, which restores clarity to faces in images. Their Noise Reduction and Sharpening tools are also noteworthy, reducing visual noise and clarifying details with remarkable efficiency. The software is optimized for local workstation use, ensuring a smooth workflow for professionals.

Topaz Video AI offers remarkable video enhancements, including upscaling, deinterlacing, and frame interpolation, all optimized for local production workflows. The AI models are trained on millions of images to understand and improve "image quality," a process that undergoes continuous refinement, as evidenced by the release of over 100 new or improved AI models since 2018.

The website showcases impressive before-and-after examples from various photographers, highlighting the transformative impact of Topaz software. With over 1 million customers and 32,000 5-star reviews, Topaz Labs has earned the trust of professionals across industries, including notable clients like NASA, Netflix, and Disney. The company invites users to try their software for free, emphasizing their commitment to delivering the highest standard in photo and video enhancement.
