

A monthly website and SEO report with **human-reviewed findings** and practical priorities based on the available data.

\$178 - \$267 / Month Typical Monthly Effort: 2 - 3 Hours

Understand What Changed Each Month

This recurring service gathers selected website performance, search visibility, and technical-health data into a clear monthly report. The findings are reviewed by a person to identify notable changes, recurring concerns, and practical priorities for the next period.

The report is intended to help you monitor direction and decide where attention may be useful. Coverage depends on the tools and data sources available for your website, so each report focuses on supported measurements rather than promising every possible metric.

What Is Included

Available Performance Data

Relevant traffic, search, ranking, page-performance, and technical-health measurements from connected and supported tools.

Month-to-Month Review

Human review of notable changes, trends, recurring issues, and areas that may warrant closer investigation.

Practical Priorities

A concise set of observations and suggested next steps based on the findings covered in that month's report.

Scope & Data Availability

The monthly estimate covers report preparation, human review, and concise findings for one website using the agreed data sources. It does not include AI-generated analysis, implementation of recommended changes, a full technical or competitor audit, custom tracking development, paid third-party tools, recovery of missing historical data, or ongoing consulting beyond the report. Additional websites, data sources, investigation, or meetings are separate scope.
