

Rapid response for **hacked, broken, or white-screened** websites. We get you back online fast.

\$550 - \$1,800 Duration: 3 - 10 Hours

Technical 911

When your site goes down, you lose money and reputation. Our Emergency Response service is designed for critical failures: malware infections, "White Screen of Death" PHP errors, or failed updates.

We isolate the issue, restore functionality, and then perform a forensic clean-up to prevent it from happening again.

Recovery Actions

Malware Removal

Scanning and surgically removing malicious code, backdoors, and shell scripts.

Log Forensics

Analyzing access logs to determine how the attackers got in and patching the hole.

Integrity Check

Comparing core files against the official repository to ensure no modifications remain.
