

## System Update & Patching

Category: Maintenance & Health - Hidden Issues Undermine Performance

---

A comprehensive **one-time update sweep** for clients who don't want a monthly subscription. We bring everything up to date and check for immediate issues.

\$200 - \$400 Duration: 3 - 5 Hours

## Safe & Secure Updates

Clicking "Update" can sometimes break your site. We take the anxiety out of maintenance by performing a full manual backup before applying any patches.

We update your CMS core (Joomla/WordPress), all plugins, and templates, then manually review the error logs and critical pages to ensure everything is still working perfectly.

## Update Process

### Full Backup

We take a complete snapshot of files and database before touching anything.

## **System Update & Patching**

Category: Maintenance & Health - Hidden Issues Undermine Performance

---

### **Error Log Review**

Checking server logs for silent PHP warnings that might indicate future problems.

### **Security Audit**

Quick scan for known vulnerabilities in your currently installed extensions.
