Extend the functionality of Joomla or WordPress with **custom plugins** built for your unique requirements.

Starting at $1,500 Typical Duration: 1 - 3 Weeks

Broken Features Fixed

Off-the-shelf plugins rarely fit 100%. We develop custom components, modules, and plugins that integrate seamlessly with your core CMS without hacking core files.

Examples include: Custom calculators, real-time inventory sync, specialized display modules, or payment gateway integrations.

Development Standards

Native MVC

Strict adherence to Joomla/WordPress architecture patterns for stability and upgrade safety.

Update Safe

Code that survives CMS updates. No more customized core files that break your site.

High Performance

Optimized SQL queries and asset loading to ensure the plugin doesn't slow down the site.
